## **WORLD SUMMIT ON KNOWLEDGE INDUSTRIAL REVOLUTION 2026 GLOBAL MEDIA RELEASE**

### **Unveiling the Missing Link in Global Economic Development After 75 Years**

Kerala, India — 2026:

Despite decades of unprecedented global investment in development, inequality and stagnation persist. WSKIR 2026 introduces a breakthrough that identifies Knowledge—not capital or technology—as the true engine of human progress.

For 75 years, global institutions focused on infrastructure, capital, and reforms. Yet development remained marginal. In 1985, Dr. Raju M. Mathew identified the missing link: Knowledge is a measurable, producible economic product.

His pioneering theories—the Theory of Knowledge Consumption and Production Correlation and the Stage Theory of Knowledge Growth—prove that societies advance based on the volume and sophistication of knowledge they consume and produce.

WSKIR 2026 will unite world leaders, policymakers, CEOs, innovators, and scientists to formalize the Knowledge Industrial Revolution and deploy knowledge-intensive development models.
